## ***SURGIMESH WN***

“I prefer the softness and textile-like characteristics of SURGIMESH in open inguinal repairs where my patients have been favorably impressed with the improvement non-woven mesh makes in their hernia repair experience”

*-Dale Brancel, MD, Southwest Surgical Hospital, Hurst, TX*

“In laparoscopic inguinal cases there has been a significant decrease in patient complaints regarding post operative pain, both short and long term with SURGIMESH”

*-Maura Buckingham, DO, FACOS, South Haven Community Hospital, MI*

“Since switching to SURGIMESH, patients now rarely complain about inguinal pain beyond the expected post-op period and have never complained of a foreign body sensation”

*-Roy Danks, DO, FACOS, St. Luke's Hospital, KS*

“SURGIMESH allows a laparoscopic inguinal hernia repair without fixation or contraction and I believe this has prevented recurrence and chronic pain in my practice”

*-James Johnson, MD, Hilo Medical Center, HI*

***One-Size-Fits-All***

**“My preferred mesh for inguinal and ventral hernia repair has become SURGIMESH WN and XB due to their light weight and ease of handling during surgery and excellent patient outcomes resulting in very durable repairs over the last several years”**

*-Shaun Price, MD, Doctor's Hospital, Columbus, GA*

**“After 3 years of SURGIMESH WN use, I can attest to the superior softness & pliability of the material, the durability of the repairs (no recurrences) and, indirectly, no problems related to mesh shrinkage”**

*-Dan Richardson, MD, Beaufort County Medical Center, NC*

**“A patient recently treated speaks volumes for SURGIMESH WN in inguinal repair: 3 yrs earlier they received a knitted polypropylene plug & patch and recently had the opposite side repaired with WN plug & patch – 2 months after the recent repair the patient commented: “I can still not bend to pickup anything on the knitted side but had full mobility with no pain on the SURGIMESH side”**

*-Mark Vasko, MD, FACS, Shelbyville Memorial Hospital, IL*

**“Since switching from knitted polypropylene plug & patch to the non-woven SURGIMESH, I am seeing less pain in my open inguinal hernia patients”**

*-Ronald Zelnick, MD, Laser & Surgery Center of the Palm Beaches, FL*
